FINTECHATHON 2026

BorderWise AI

Cross-border & Student Finance Assistant

Plan study-abroad costs. Compare transfer quotes. Make assumptions visible.

TEAM: [ADD TEAM NAME] • TRACK: TOPIC C

Prototype: read-only estimates; no bank access or money movement.

One journey. Too many financial unknowns.

01 Tuition & arrival

What must be paid before departure, and when?

02 Monthly affordability

How do living costs compare with savings and family support?

03 Cross-border transfers

Which quote delivers more after fees and FX conversion?

04 Credit & readiness

What should a student verify before choosing a product?

The risk is not only high cost — it is making decisions with unclear assumptions.

A practical finance companion — not a black box

BORDERWISE AI

User inputs → transparent tools → inspectable results

Every rate is labeled. Every formula is auditable. No external payment action exists.

Budget planner	Upfront cost + monthly burn + available funding → funding gap
Transfer comparison	Same total BDT budget → estimated recipient amounts ranked
Credit & readiness	Questions to ask providers and official authorities
Ask agent	Bounded explanations; safe fallback when no model key is configured

From a question to a decision-ready estimate

01

Enter assumptions

Costs, savings, support, reference FX

→

02

Calculate

Funding gap in destination currency and BDT

→

03

Compare

Two provider quotes under one transfer budget

→

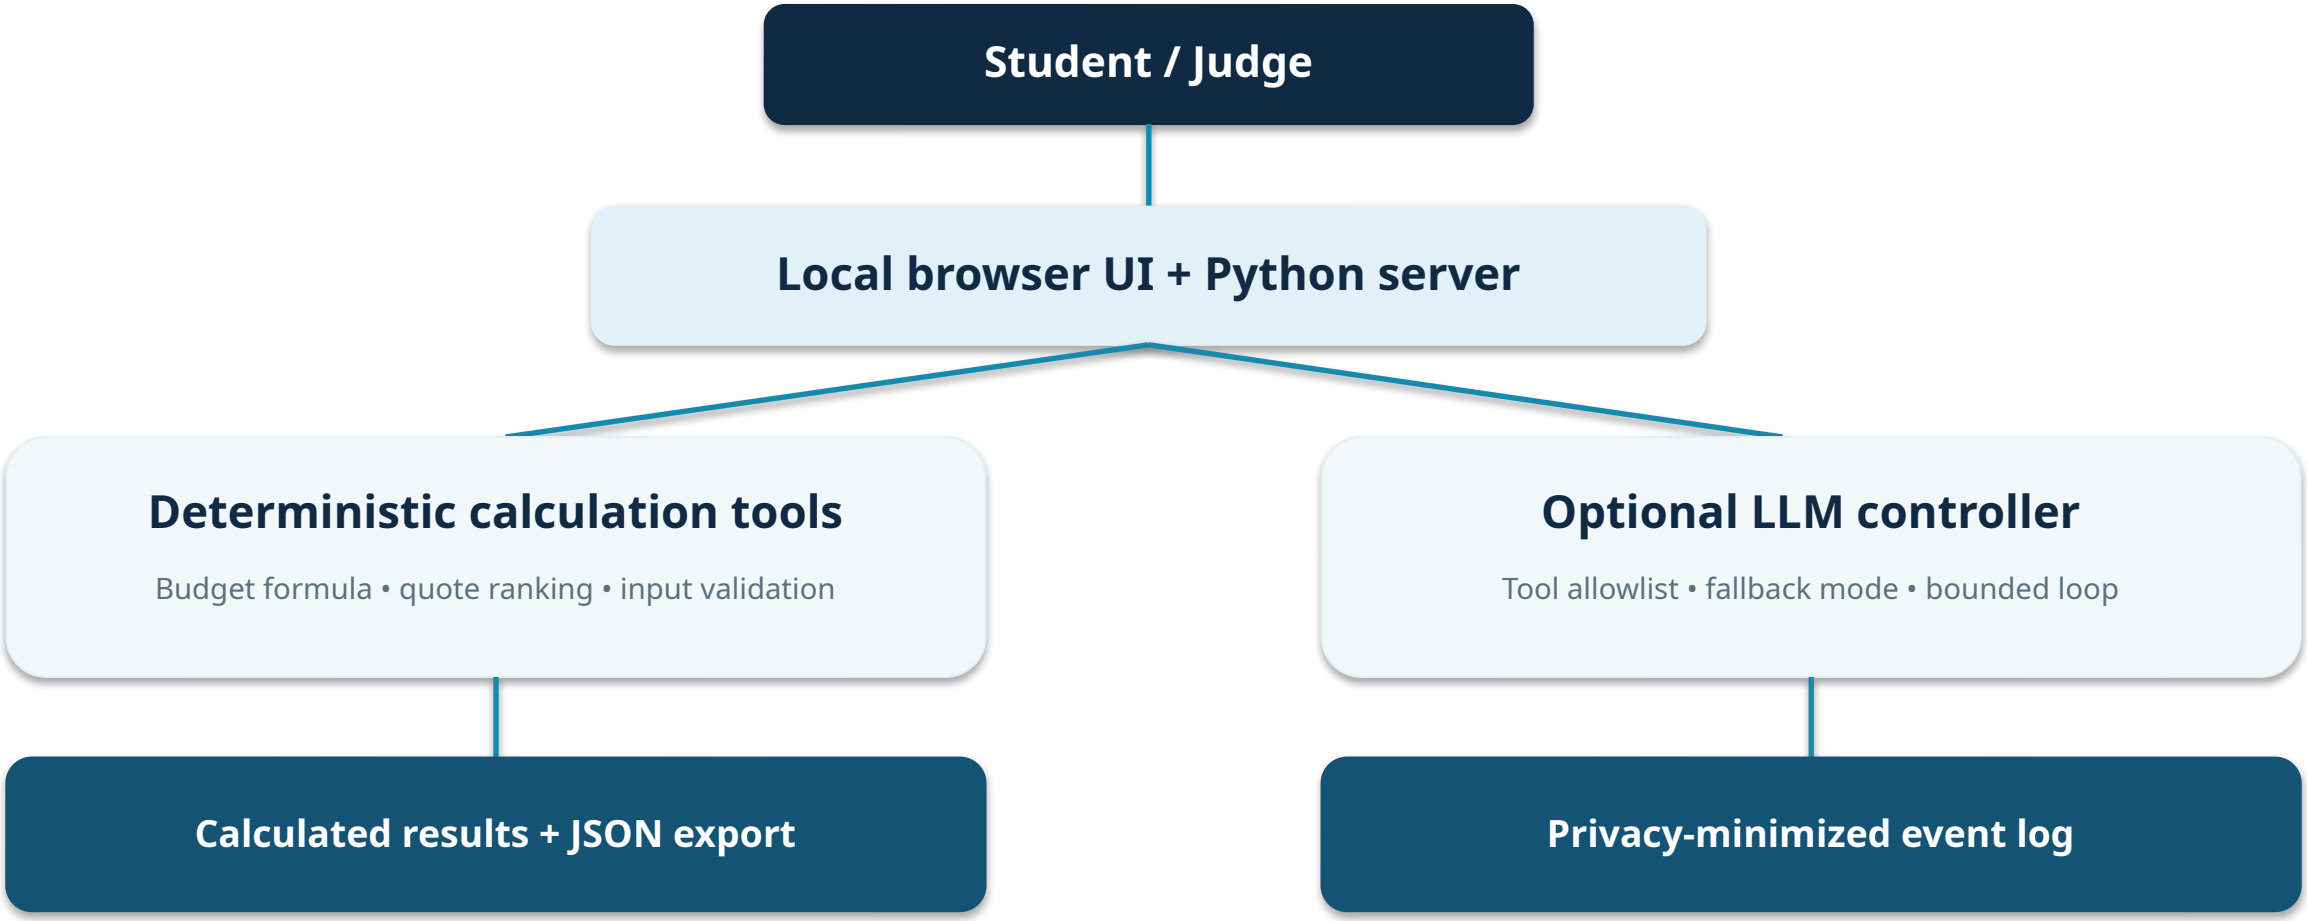

04

Verify

Check official requirements and provider terms

Example values are fictional. The user owns the assumptions; the agent exposes the math.

Simple architecture. Controlled capabilities.

Safety is part of the product, not a disclaimer

READ-ONLY	No transfer, account login, credit application or document submission tools.
ALLOWLISTED TOOLS	Only the two calculator functions may execute from model tool calls.
NO LIVE CLAIMS	User-entered rates are not represented as current or independently verified.
PRIVACY-MINIMIZED	Audit entries do not store prompts, amounts, or documents.
OFFICIAL CHECKS	Visa and proof-of-funds requirements must be verified with official authorities.

Known limits: no live FX, no provider verification, no bank integration, no legal/immigration determination.

What we can demonstrate today

21 / 21

automated tests passed

Arithmetic • invalid inputs • quote ranking • tool allowlist

HTTP smoke test	Local page, health route and budget API responded
Repeatable logic	Deterministic functions isolated from LLM responses
Safe demo mode	Works without API key and uses fictional values
Next evidence	Capture the real browser walkthrough and test output before upload

Unit tests are not a security audit or an end-to-end UI test.

From demo to trusted student-finance infrastructure

NOW	**Budget + quote calculator**	Usable local demo
NEXT	**Trusted FX + timestamps**	Source-backed rates & stale-data checks
LATER	**Official country links**	Verified requirements with last-checked dates
BEFORE PRODUCTION	**Privacy, compliance & audit**	Independent security and jurisdiction review

BorderWise AI — clear costs, better comparisons, safer next steps.
